

Professional Summary

Possess extensive experience in Android development, with a proven track record of successfully developing and launching multiple AI-based social apps and gaming products for overseas markets on the Google Play platform. Proficient in English listening and speaking, able to read technical documentation fluently, and communicate and collaborate effectively with international teams.

Employment History

Guangzhou Xinyan Information Technology Co., Ltd.

Android

2025.04-2025.10

Business Scope:
Overseas Social Gaming Applications

Weelife is an overseas social gaming app that integrates AI-driven social interaction with a 3D virtual world, targeting young users. The project is built using Unity + native Android modules, enabling users to interact, share content, and build immersive social experiences within a virtual world.

Responsibilities:
Weelife:

1. Built a secure communication and encryption layer implementing AES + RSA dual encryption, request signature verification, and an automatic key refresh mechanism to ensure data transmission security.
2. Developed a custom signature verification plugin (C#/JNI) to perform anti-cheating and anti-tampering validation, enhancing overall app security.
3. Optimized the app’s cold-start process, reducing startup time by approximately 30%, resulting in a 5% improvement in user retention.
4. Contributed to Unity3D UI and interaction development, and implemented Unity-native interface calls (e.g., gallery selection, payment, permission management).

Shenzhen Beiyoute Interactive Entertainment Co., Ltd.

Android

2019.08-2025.02

Business Scope:
Overseas AI Social Applications and Social Games

BUD is an overseas AI social application with a user base of tens of millions MAU, primarily targeting teenage players. Its core feature is low-barrier UGC content creation, allowing players to easily customize avatars and maps, and share their creations with others in a virtual world.

Responsibilities:
BUD and Biyouiti World:

1. Led Android development from scratch (0 to 1), building the project with Kotlin + MVVM + Jetpack, successfully launching and supporting tens of millions MAU.
2. Set up Jenkins automated build pipelines, reducing Unity-to-Android build time by 70%, significantly improving team development efficiency.
3. Provided Unity-to-native integration, enabling features like photo selection, phone permission access, and payment invocation.
4. Integrated channel SDKs for faster launch on major domestic app stores, while releasing the overseas version on Google Play.
5. Implemented analytics tracking to collect user journey data and identify online issues, improving user retention.
6. Integrated Firebase for Crash and ANR monitoring, successfully reducing crash rate by 0.2%, enhancing app stability.
7. Optimized cold-start logic, reducing startup time by 30%, boosting user retention by 5%.
8. Optimized APK size, reducing package size by 10%, improving download and installation experience.
9. Refactored the project in Kotlin, reducing maintenance complexity and increasing team development efficiency.
10. Integrated RongCloud IM SDK to support overseas social IM functionality.
11. Developed parts of the Unity3D game interface.

Internship

Shenzhen Taiwan Proscenic Technology Co., Ltd. Android 2018.10-2019.07

Participated in the development of ProscenicHome App: Contributed to the development and launch of the smart hardware app on Google Play and major domestic app stores. Implemented long-connection interaction between smart robotic vacuum cleaners and the app, including scheduled cleaning. Integrated third-party SDKs to enable interaction with smart humidifiers, device sharing, and push notifications using JPush (domestic) and Google FCM (overseas).

Shenzhen MicroVision Technology Co., Ltd. Guangzhou Branch Android 2018.07-2018.10

Participated in the development of Data Recovery Assistant App: Analyzed requirement documents and implemented features including chat recovery, image recovery, and video recovery, as well as most of the UI. Developed using Java and utilized SVN for version control and collaborative development. Communicated with QA testers to identify and resolve defects.

Participated in the development of Afa Mobile Payment App: Analyzed requirement documents and collaborated with backend developers to implement QR code payments, bank payments, and WeChat/Alipay payments. Used GIT for version control and collaborative development.

Education

Hanshan Normal University Bachelor Educational Technology 2015-2019

Certification

CET-6 NCRE-2
